

Amgrow-Sir Walter Buffalo Lawn

PEST CONTROL

“Amgrow-Sir Walter” Buffalo Lawn Pest Control 2kg

Controls Lawn Grubs, beetles, ants, earwigs, millipedes, mole crickets, and slaters. Use on lawn or in garden beds. Covers 500sq metres

- Controls Lawn Grubs, beetles, ants, earwigs, millipedes, mole crickets, and slaters
- Use on lawn or in garden beds
- Resealable 2 Kg bucket – keeps product fresh, effective and safe
- Ready to use
- 2kg will cover 500sq metres

HOW TO USE:

This product is ready to use and needs no further preparation. Amgrow Sir Walter Buffalo Lawn Pest Control granules will rid your lawn of Lawn Beetles and Grubs that can damage grass and roots. The granular form ensures maximum penetration of soil. If lawn areas have excessive thatch on the soil surface this can reduce the effectiveness of the insecticide.

SITUATION:

Lawns and Garden Beds

PESTS:

Lawn Grubs, Beetles, Millipedes, Earwigs, Mole Crickets, Slaters, Ants

RATE:

400g per 100 square metres

HOW TO APPLY:

Sprinkle granules evenly over the area to be treated. Apply by using a spreader or mix with fertiliser or topdressing. Apply Sept-Jan or March-April. Treat whenever pests are active. Water well soon after application.

THE LIFECYCLE OF LAWN BEETLES

Adult beetles feed on grass roots from September to November. Eggs are laid in October and November and then the adult beetles die.

Within two weeks, eggs hatch to tiny grubs which feed on grass roots from November to January. Grubs then bury deeply in the soil, and change to beetles during February.

The newly hatched beetles feed on grass roots until April or May, when they bury deeply into the soil and become dormant during winter. The cycle starts again in September.
